

Clinical Policy: Rufinamide (Banzel)

Reference Number: IL.ERX.PMN.157

Effective Date: 06.01.21 Last Review Date: 08.21

Line of Business: Illinois Medicaid Revision Log

See <u>Important Reminder</u> at the end of this policy for important regulatory and legal information.

Description

Rufinamide (Banzel®) is a triazole derivative.

FDA Approved Indication(s)

Banzel is indicated for the adjunctive treatment of seizures associated with Lennox-Gastaut syndrome (LGS) in pediatric patients 1 year of age and older, and in adults.

Policy/Criteria

Provider must submit documentation (such as office chart notes, lab results or other clinical information) supporting that member has met all approval criteria.

It is the policy of health plans affiliated with Envolve Pharmacy Solutions that Banzel is **medically necessary** when the following criteria are met:

I. Initial Approval Criteria

A. Lennox-Gastaut Syndrome (must meet all):

- 1. Diagnosis of LGS;
- 2. Prescribed by or in consultation with a neurologist;
- 3. Age ≥ 1 year;
- 4. Failure of two preferred alternatives for LGS (see Appendix B for examples) unless all are contraindicated or clinically significant adverse effects are experienced;
- 5. Dose does not exceed 3,200 mg (8 tablets or 80 mL) per day.

Approval duration: 12 months

B. Other diagnoses/indications

1. Refer to ERX.PA.01 if diagnosis is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized).

II. Continued Therapy

A. Lennox-Gastaut Syndrome (must meet all):

- 1. Currently receiving medication via a plan affiliated with Envolve Pharmacy Solutions, or documentation supports that member is currently receiving Banzel for LGS and has received this medication for at least 30 days;
- 2. Member is responding positively to therapy;
- 3. If request is for a dose increase, new dose does not exceed 3,200 mg (8 tablets or 80 mL) per day.

Approval duration: 12 months

B. Other diagnoses/indications (must meet 1 or 2):

- 1. Currently receiving medication via a health plan affiliated with Envolve Pharmacy Solutions and documentation supports positive response to therapy.
 - Approval duration: Duration of request or 12 months (whichever is less); or
- 2. Refer to ERX.PA.01 if diagnosis is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized).

III. Diagnoses/Indications for which coverage is NOT authorized:

A. Non-FDA approved indications, which are not addressed in this policy, unless there is sufficient documentation of efficacy and safety according to the off-label use policy –

ERX.PA.01 or evidence of coverage documents.

IV. Appendices/General Information

Appendix A: Abbreviation/Acronym Key FDA: Food and Drug Administration LGS: Lennox-Gastaut syndrome

Appendix B: Therapeutic Alternatives

This table provides a listing of preferred alternative therapy recommended in the approval criteria. The drugs listed here may not be a formulary agent and may require prior authorization.

	not be a formulary agent and may require prior auth	
Drug Name	Dosing Regimen	Dose Limit/ Maximum Dose
topiramate (Topamax [®] , Trokendi [®] XR, Qudexy [®] XR)	 Adults and Adolescents 17 years and older: Initial dose is 25 to 50 mg/day orally. Maintenance dose is 200 to 400 mg/day orally (divided and given twice daily). Children and Adolescents 2 to 16 years: Initial dose is 1 to 3 mg/kg/day (max: 25 mg/day) orally once daily in the evening. Maintenance dose is 5 to 9 mg/kg/day orally. 	Age ≥ 17: 400 mg/day Age 2 – 16: 25 mg/day
lamotrigine (Lamictal [®] CD, ODT, XR)	 Patients receiving enzyme-inducing AEDs (e.g., carbamazepine, phenobarbital, phenytoin, primidone) NOT to include valproate: Adults and Adolescents: Initial dose is 50 mg orally daily. Maintenance dose is 300 to 500 mg/day orally given in 2 divided doses. Children 2 to 12 years: Initial dose is 0.6 mg/kg/day orally in 2 divided doses.	With valproate: 100 mg/day With enzyme-inducing drugs: 400 mg/day
felbamate (Felbatol®)	Adolescents and Children 2 - 14 years: Add felbamate at 15 mg/kg/day orally in 3-4 divided doses while reducing doses of other AEDs by 20-30%. Increase felbamate dose by 15 mg/kg/day increments at weekly intervals to 45 mg/kg/day orally. Max dose is 3,600 mg/day orally.	3,600 mg/day
clobazam (Sympazan [®] , Onfi [®])	For Adults, Adolescents, & Children older than 2 years: • Patients weighing > 30 kg: Initial dose is 5 mg orally twice daily. Max dose is 20 mg orally twice daily. Dosing should be individualized based upon efficacy and tolerability.	LGS: ≤ 30 kg: 0.2 mg/kg/day > 30 kg: 20 mg/day

Drug Name	Dosing Regimen	Dose Limit/ Maximum Dose
	 Patients weighing ≤ 30 kg: Initial dose is 5 mg orally once daily. Max dose is 10 mg orally twice daily. Dosing should be individualized based upon efficacy and tolerability. 	
clonazepam (Klonopin [®])	 For Adults, Adolescents, & Children: Patients weighing > 30 kg: Initial dose is 1.5 mg/day orally, given in three equally divided doses. Max dose is 20 mg/day orally, given in three equally divided doses. Patients weighing ≤ 30 kg: Initial dose is 0.01 to 0.03 mg/kg/day orally, given in three equally divided doses. Max dose is 0.1 to 0.2 mg/kg/day orally, given in three equally divided doses. 	≤ 30 kg: 0.2 mg/kg/day > 30 kg: 20 mg/day
valproic acid (Depakene®), divalproex sodium (Depakote®) [‡]	Initial dose is 7 to 10 mg/kg/day PO, given three to four times daily for nonenteric-coated capsules or syrup, BID for delayed-release tablets, and QD for the extended release preparation. A typical adult starting dose is 500 mg QD. The max dose is 60 mg/kg/day or 3,000 mg/day.	60 mg/kg/day or 3,000 mg/day
levetiracetam (Spritam®, Keppra®)*	Initial dose is 5 mg/kg/day PO, given in two or three equal doses per day. Max dose is 20 to 80 mg/kg/day PO, according to effectiveness and tolerability.	80 mg/kg/day

Therapeutic alternatives are listed as Brand name® (generic) when the drug is available by brand name only and generic (Brand name®) when the drug is available by both brand and generic.

‡ Off-label

Appendix C: Contraindications / Boxed Warnings

- Contraindication(s): familial short QT syndrome
- Boxed warning(s): none reported

V. Dosage and Administration

Indication	Dosing Regimen	Maximum Dose
LGS	 Pediatric patients 1 year to less than 17 years: Starting daily dose: 10 mg/kg per day in two equally divided doses; Increase by 10 mg/kg increments every other day to maximum dose of 45 mg/kg per day, not to exceed 3200 mg per day, in two divided doses 	3200 mg/day
	 Adults (17 years and older): Starting daily dose: 400-800 mg per day in two equally divided doses; Increase by 400-800 mg every other day until a maximum dose of 3200 mg per day, in two divided doses, is reached 	

VI. Product Availability

Film-coated tablets: 200 mg, 400 mg

• Oral suspension: 40 mg/mL

Important Reminder

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information.

This Clinical Policy is not intended to dictate to providers how to practice medicine, nor does it constitute a contract or guarantee regarding payment or results. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members.
